

OpenEd Human-AI-Expert Operating Model

Purpose

OpenEd should not frame AI as replacing educators. The operating model defines what humans handle, what AI handles, what OpenEd Team handles, and where escalation is required.

Operating principle

AI increases access to feedback. Humans retain responsibility for course quality, pedagogy, trust, and high-stakes judgments.

Responsibility matrix

Task	AI tutor	Educator	OpenEd Team	Learner
Explain lesson concept	Primary	Review quality	Policy/safety	Ask/learn
Answer source-based question	Primary with citations	Provide sources	QA source policy	Ask/verify
Generate lesson draft	Assist	Owns/reviews	QA	N/A
Create final course	No	Primary	Review/publish	N/A
Quiz feedback	Primary formative	Creates/reviews	QA	Attempts
Artifact formative feedback	Assist	Optional review	QA rubric	Builds/ revises
High-stakes grading	Assist only	Human/reviewer later	Policy	Submits
Moderation	Flag	Report	Primary	Report
BYOK key management	No storage	No access	No access	Owns
Course safety	Flag	Responsible	Primary	Report

Human roles

Learner

Learner is active:

- Attempts questions.
- Asks doubts.
- Builds artifacts.
- Reflects on feedback.
- Decides what to share.

Educator

Educator owns course truth:

- Defines objectives.
- Selects sources.
- Approves AI-generated drafts.
- Designs assessments.
- Designs rubrics.
- Responds to course feedback.

OpenEd Team

OpenEd Team owns platform trust:

- Reviews course quality.
- Enforces source and safety requirements.
- Manages IAM.
- Handles abuse reports.
- Monitors quality metrics.
- Updates policy.

AI roles

AI handles:

- Personalized explanations.
- Hints.
- Examples.

- Quiz feedback.
- Drafting support.
- Rubric-aligned feedback suggestions.
- Source summarization.
- QA issue flagging.

AI should not handle alone:

- Publishing approval.
- High-stakes certification.
- Final credential decisions.
- Sensitive policy decisions.
- User discipline.
- Content takedown without human review.

Escalation rules

Escalate to educator or OpenEd Team when:

- Tutor cannot answer from sources.
- Learner reports wrong/harmful answer.
- Content involves safety-sensitive domain.
- Artifact feedback is disputed.
- Course source is missing or broken.
- Learner asks for direct cheating help.
- Moderation report is filed.

AI transparency

OpenEd should show:

- When the AI is answering from course sources.
- When it is making a general explanation.
- When confidence is low.
- When a human review is required.
- Whether the answer is formative, not final grading.

Human workload control

The model should not create unmanageable human review queues. Use triage:

Item	Review priority
New course publish	High
Reported unsafe content	High
Tutor hallucination report	Medium-high
Generic learner doubt	AI handles
Routine quiz feedback	AI handles
Low-risk source metadata issue	Batch review

Failure modes

Failure	Mitigation
Educators overtrust AI drafts	Mandatory educator review and source verification.
Learners overtrust tutor	Citation, uncertainty, and source drawer.
OpenEd Team overloaded	Automated QA triage and risk-based review.
AI undermines learning	Hint-first and Socratic modes.
Experts become bottleneck	Use expert review for templates, rubrics, and high-risk courses first.

V1 implementation

V1 should implement:

- Tutor answer reporting.
 - Educator source and rubric ownership.
 - OpenEd Team publish approval.
 - Audit log for moderation and approvals.
 - Clear labels: AI feedback vs educator feedback.
-

Source notes

This document is grounded in the current OpenEd/FME project context and the following reference set where applicable:

- Uploaded Frontier Model Evaluations prototype code bundle, latest inspected bundle: Design System for Frontier Model Evaluation (5).zip.
- Uploaded Frontier Model Evaluations 51-hour curriculum and Module 1 foundations files.
- Coursera, Udemy, DataCamp, Moodle, Khanmigo, Duolingo public documentation and product pages.
- Supabase Auth and Row Level Security documentation.
- OpenAI API key safety guidance, MDN Web APIs, and YouTube IFrame Player API documentation.
- Bloom's 2 sigma problem, intelligent tutoring systems research, CourseAssist, LearnLM-Tutor, DCCI, and UNESCO guidance for generative AI in education.
